Circular Building Design: Strategies and Tools

For us, architecture offers a way of searching the built environment for solutions to the most pressing social, societal, economic and ecological challenges of our time. True originality and creativity emerges when human coexistence, our immediate environment and our global context are taken into account.

Stefan Krötsch · Klingelhöfer Krötsch Architekten, Munich

Architecture, Timber and other Challenges

Timber could be the perfect material for the future challenges the building sector is facing. Unfortunately it usually takes a lot of concrete to build with timber. This is where architecture has to find new paths into the future.
